

CODY LIEW CHERN JIN

AI & Software Engineer

codyyliew@gmail.com | +6019-6008826 | [linkedin.com/in/codyy6](https://www.linkedin.com/in/codyy6) | github.com/codyy6

PROFESSIONAL SUMMARY

AI Product Engineer and Software Engineer with experience shipping production LLM systems, billing infrastructure, and scalable cloud platforms. Focused on agent optimization, prompt engineering, and cost-efficient infrastructure, with a track record of leading distributed teams and resolving high-impact security and reliability issues.

TECHNICAL SKILLS

AI / LLM: Agentic Systems, Prompt Engineering, Context Engineering, Reinforcement Learning, LLM Observability (Langfuse), Model Evaluation

Cloud & Infrastructure: AWS (EKS, EC2, S3, Route 53), Kubernetes, OpenSearch

Frontend: React, [Knockout.js](https://react.dev/), Next.js

Practices: FedRAMP Compliance, WCAG Accessibility, Security Auditing, Cost Optimization

PROFESSIONAL EXPERIENCE

AI Product Engineer / AI Lead | YTL AI Labs (chat.ilmu.ai) Jan 2026 – Present
Kuala Lumpur, Malaysia

- Delivered subscription and billing systems covering gifting, recurring payments, proration, and revenue-protection safeguards across multiple plan tiers.
- Built an LLM observability stack (Langfuse) capturing structured span metadata — tool iterations, failures, token usage, execution duration, and paths — across agent runs.
- Optimized AI agents by simplifying logic and re-engineering prompts, cutting token usage 70–80% while maintaining response quality; extended savings further by implementing reusable agent skills.
- Reduced Kubernetes resource usage 20–40% and AWS costs ~5% through EKS namespace management and removal of idle load balancers and instances.
- Resolved critical AI reasoning-content exposure issues and closed 8+ security audit gaps across authentication and onboarding systems.
- Diagnosed and resolved a retry storm between the application and AI Gateway, cutting request load 15–25%.
- Identified and fixed an analytics miscalculation bug that was distorting system-wide error rates by 1–5%.
- Built a configuration control system for dynamic model selection, subscription plan configuration, feature flag groups, and runtime overrides.
- Coordinated distributed engineering teams across Vietnam and Malaysia, eliminating duplicate work and improving cross-team delivery.

Software Engineer | Ideagen (Huddle) Oct 2024 – Sep 2025
Shah Alam, Malaysia

- Migrated 25%+ of legacy Knockout.js code to functional React components while maintaining 100% test coverage on new components.
- Led a zero-downtime reindexing initiative for 1M+ documents in OpenSearch, sustaining 99.9% system availability throughout migration.
- Improved product search functionality, cutting search time 10–20% and enabling deeper drill-down via expanded OpenSearch index fields.
- Resolved 20% of open accessibility violations, improving WCAG compliance.
- Ensured full FedRAMP compliance across the product and worked across AWS services including Route 53, EC2, OpenSearch, and S3.
- Troubleshooted cross-platform environment issues on Windows and Ubuntu to keep services running.
- Selected as technical panelist for the CEO's organizational AI strategy tour, contributing to the implementation roadmap.

Prompt Engineer | Outlier *Apr 2023 – Dec 2024*

Remote, United States

- Optimized prompts for large language models with a focus on Chinese language nuance and cultural context, using reinforcement learning techniques.
- Evaluated 100+ Chinese-language AI responses weekly, maintaining an 80% accuracy rating from the development team.
- Authored detailed feedback reports that informed model performance and user-experience improvements.

PROJECTS

Small Language Model — Built a small-scale language model from the ground up. github.com/codyy6/Small-Language-Model

AI Smart Contract Auditing Platform — Vulnerability detection model for auditing smart contracts.

github.com/codyy6/AI-Smart-Contract-Vulnerability-Detection-Model

Lower Back Pain Detection — Predictive model for lower back pain risk. github.com/JiaYong02/Lower-Back-Pain-Prediction

Hotel Review Sentiment Analysis — Text analytics on hotel reviews to extract sentiment trends.

github.com/codyy6/Text-Analytic-Hotel-Review-Sentiment-Analysis

Gloves Defect Detection — Computer vision model to detect manufacturing defects in gloves.

github.com/EHeng17/glove-defect-detection

EDUCATION

Asia Pacific University of Technology and Innovation (APU)

Bachelor's Degree in Computer Science, Specialized in Artificial Intelligence • *CGPA: 3.58*

Asia Pacific University of Technology and Innovation (APU)

Diploma in Data Informatics • *CGPA: 3.78*
